Resort & Spa

INSULA ALBA Resort & Spa – Environmental policy

Protection of the environment and sustainability are some of our main targets on our operations. We intend to help us much as we can in reducing pollution and save natural resources and energy.

To achieve that, in collaboration with our staff and our guests:

We save water:

We gradually reduce the flow of all faucets. We inform guests on ways of saving water. We inform and train our staff on saving water.

We save power:

We install motion sensors in all public areas. We inform our guests on ways of saving power. We inform and train our staff on saving power. We expand our solar field. We thermally insulate our buildings, in order to reduce the A/Cs usage.

We protect the nature:

We keep our chemicals in safe places. We maintain our facilities in order to avoid any spoils, and in case of a spoil, we install detection systems to find it as quickly as possible. We use the reverse osmosis procedure for cleaning the waste water, which after we use for watering.

We use more technology-we reduce the impressions:

We install PCs in all hotel's departments, in order to communicate by e-mails. We use damages recording system, in order to reduce the impressions and to fix damages quickly. We replace the old printers, with new ones that can print in both sides of paper. We abolish the printed questionnaires, and we use an online application to collect our guests' feedback.

We recycle:

We install recycling bins around the hotel. We recycle batteries. We recycle toners. We recycle the cooking oils.

Our goal is during season 2018 to succeed:

Reducing power consumption by 10%.

Reducing water consumption by 10%.
